

Mimicking quantum phenomena with classical meta-materials.

N.I.Zheludev

Optoelectronic Research Centre, University of Southampton, SO17 1BJ, UK

Abstract- In this talk we aim to explore some parallels between the well established quantum effects and electromagnetic response of meta-materials. Keystone quantum phenomena like Electromagnetically Induced Transparency (EIT), Stimulated Emission, the Mossbauer Effect, the Meissner Effect and beta-decay are among those that have intriguingly close counterparts in electromagnetic meta-materials.
